SUMMARY

U.S. exports of horticultural products in August 1986 totalled $226 million, 1 percent less than August 1985. On the positive side, the volume of both fresh citrus and fresh vegetables exported were 27 percent higher than in August last year. Lower lemon prices contributed to a 67 percent volume increase; grapefruit sales were 44 percent higher. Onion sales were triple last August's level. Dried fruit shipments continued strong, with raisin showing an 88 percent increase and dried prune movement doubling. Sales of both canned and frozen sweet corn gained. On the negative side, fresh deciduous exports slowed as California harvests ended earlier than usual, and citrus juice shipments slumped despite growth in grapefruit concentrate sales. Tight supplies and rising prices reversed the explosive growth in treenut exports; August volume was 46 percent below last year's level. Horticultural product exports for the eleven months of the fiscal year through August totalled $2.46 billion, 3 percent more than the same period a year earlier.

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures unless otherwise noted, are metric. One kilogram (kg)=2.2046 lbs., 1 metric ton=2,204.62 lbs., 1 liter=0.2642 gallon, 1 hectoliter=26.42 gallons & 1 hectare (ha)=2.471 acres

UPDATE

General Developments

--The 4th biennial Food, Equipment and Catering Exhibition, SAUDIFOOD '87, will be held in Riyadh, Saudi Arabia, Feb. 14-18, 1987. In 1985 this show attracted more than 400 exhibitors from over thirty countries, and more than 5,000 registered "trade-only" visitors. The Foreign Agricultural Service is sponsoring a U.S. pavilion at this show with approximately 30 booths, representing food products from throughout the United States. Space is still available in the U.S. pavilion at SAUDIFOOD. For additional information contact: Processed Foods Division, Foreign Agricultural Service, Room 4944 South Building, Washington, D.C. 20250, Tel: (202) 447-3031.

--The Government of Australia has announced a broad ranging inquiry into Australia's fruit and fruit products industries. The inquiry will exclude the grape growing and dried vine fruit industries and the export underwriting arrangements for apples and pears. An interim report on whether temporary assistance should be extended to the growing of citrus fruit was due Oct. 8, 1986. A second interim report, due Jan. 31, 1987, will consider whether the statutory marketing arrangements for canned deciduous fruit and assistance to the canned fruit industry should be varied. The final report, to be completed within 18 months, is to review government assistance to the fruit and fruit products industries and examine the potential for future growth and increased exports.

Citrus and Products

--Because of an expected short satsuma orange (unshu mikan) crop in Japan (forecast by the Japanese Government at 2.14 million tons for 1986/87), the Japan Fruit Juice Association has asked the Japanese Government to issue an additional orange juice import quota on an emergency basis. The total quantity requested is 20,000 metric tons, on a five-to-one concentrate basis. In response to the industry request, a quota of about 5,000-7,000 tons is expected to be issued in October. This would be an interim action because it is too early to predict the actual amount of concentrate to be produced from the 1986 satsuma crop. However, the availability of satsumas for processing is expected to decline sharply in the coming season resulting in reduced domestic juice production. The industry anticipates that another emergency quota of 5,000-7,000 tons will be allocated in January or February of 1987. If so, this would bring total emergency quotas for Japanese Fiscal Year (JFY) 1986 (April 1986-March 1987) to 10,000-14,000 metric tons. This would be in addition to the JFY 1986 8,000-ton quota issued in April 1986 in accordance with the 1984 U.S./Japan Trade Agreement on Beef and Citrus.

--By Oct. 16 the International Trade Administration (ITA) of the Department of Commerce is scheduled to make its preliminary determination whether Brazilian frozen concentrated orange juice (FCOJ) is being sold in the United States at less than fair value (LTFV) by Oct. 16. Florida Citrus Mutual, a grower organization, filed a petition for the imposition of antidumping duties on imports of FCOJ from Brazil with the ITA and the International Trade Commission (ITC) on May 9, 1986. The ITC made its preliminary determination in June that a reasonable indication did exist that a U.S. industry is being injured by imports of Brazilian FCOJ.

The ITA's investigation focuses on the export sales of two Brazilian exporters—Citrosuco and Cutrale—from November 1985 to April 1986. ITA will determine if Cutrale sold FCOJ in the United States at LTFV by comparing Cutrale's sale prices in the United States with its domestic sales. A comparison of domestic and export prices, however, is not possible for the Citrosuco analysis since ITA has determined that Citrosuco's domestic sales are insufficient to constitute a viable domestic market. The ITA will determine if Citrosuco has sold its FCOJ in the United States at LTFV by a comparison of its estimated cost of production and export sale prices. The ITA agreed to the petitioner's request also to consider this cost basis of LTFV analysis in its final calculations for Cutrale.

If ITA's investigation shows sales at LTFV, dumping duties could be imposed by the United States. Specific duties would be charged against shipments from each of the two investigated firms, while all other Brazilian exporters would face a dumping duty equivalent to the average of the duties placed on Citrosuco and Cutrale. U.S. Customs will be instructed to begin collecting bond payments from U.S. importers of Brazilian FCOJ if the preliminary results of the ITA's investigation confirm sales at LTFV. The import bond would be adjusted according to ITA's final calculations and eventually converted to duty payments following an affirmative injury ruling of the ITC. If the ITC determines that a U.S. industry is not injured by imports of Brazilian orange juice, all bond money posted with U.S. Customs would be returned.

ITA and ITC calendar deadlines in the FCOJ anti-dumping case are as follows:

A. October 16, 1986—ITA deadline for its preliminary determination.

B. Approximately mid-November for ITA hearings if requested.

C. December 30, 1986—Deadline for ITA's final determination.

D. Approximately mid-January 1987 for ITC public hearings on injury.

E. February 16, 1987—Deadline for ITC's final injury determination.

U.S. IMPORTS OF FROZEN CONCENTRATED ORANGE JUICE FROM BRAZIL

Fresh Non-Citrus

—Chile's deciduous fruit exports set an all-time record during the January-June 1986 shipping season, totalling $348 million, an 18-percent increase over 1985. Quantity shipped to the United States increased 5 percent. The United States remains Chile's top export market for table grapes, plums, peaches, and nectarines, taking 80 percent of the volume shipped. Apple and pear shipments to the United States increased 46 and 62 percent, respectively. U.S. purchases of plums, peaches, and nectarines also increased, while table grape volume declined. Chile's shipments to other countries—almost half of which were apples and pears—jumped 36 percent.

SOURCE: U.S. Agricultural Attache, Santiago

—Production of apples in major Northern Hemisphere producing countries is estimated to be up 6 percent in the 1986/87 marketing season. Increases in West Germany, France, Hungary, and Japan more than offset lower output in the United States, Spain, and Italy. Pear production in Northern Hemisphere producing countries is expected to be down 2 percent. Estimated production dropped sharply in Spain (down 41 percent) and in France (down 19 percent). Detailed production, supply, and utilization tables for deciduous fruit in Northern Hemisphere countries appear in the Statistical Section of this circular.

Dried Fruit and Nuts

—Filbert supplies in major producing countries for the 1986/87 marketing year are up 11 percent from last season. Turkey's crop is estimated at 300,000 tons, inshell basis, up 43 percent from last season's unusually low level. Production in other major producing countries is down. Stocks are low going into the new season; about one-half the quantity carried in 2 years ago. All of the stock decline occurred in Turkey.

—Almond supplies in the world's major producing countries are down 29 percent in the 1986/87 season. A sharp decline in U.S. production plus a short crop in Spain are responsible. Detailed supply and distribution tables for almonds and filberts appear in the statistical section of this circular.

—The Government of India announced Sept. 22 an increase in the value of import licenses for dried fruits, including almonds, from 20 percent to 25 percent. Applicants now can obtain licenses to import quantities valued at 25 percent of the c.i.f. value of that importer's highest level of imports in any one year since 1972-73. The increase represents a return to the value allowed in April, 1985. The United States exported $3.5 million worth of almonds to India in the 1985/86 crop year. India is the biggest market for U.S. inshell almonds, taking 34 percent of the total 1985/86 value.

Other Processed Fruit

—U.S. imports of canned deciduous fruits have dropped to their lowest levels in several years. In the first quarter of the June 1986-May 1987 marketing year, imports of canned peaches were 50 percent lower than in the first quarter of 1985/86. Imports of canned fruit mixtures and canned pears have slowed even more, down 72 percent and 85 percent respectively from last year's levels. A combination of factors has lead to the decline: U.S. carryover stocks of all three products at the beginning of the current marketing year were at their highest levels since 1981, the dollar has declined in value against the currencies of Italy and Spain, and the European Community has reduced subsidies on canning peaches following a trade agreement with the United States.

Vegetables

—In Canada, the Province of Ontario has announced a program of stabilization grants for potato growers. Ontario's Minister of Agriculture has announced that 500,000 Canadian dollars ($360,000) in stabilization grants would be made available to that province's fresh market potato growers to offset low prices in 1985. Growers will receive a grant of 14 cents (U.S.) per hundredweight for potatoes sold between July 1 1985 and June 30 1986, with a maximum payment of $4,723 per producer. A provincial stabilization program for fresh market potatoes similar to those for apples, corn, white beans, soybeans, barley, winter wheat, and hog-weaning operations, for which the provincial government contributes $2 for every $1 contributed by producers, is being developed for 1987. This year's program is funded entirely by the government. Ontario accounts for about 11 percent of total Canadian potato production.

—Area planted to potatoes for the 1986 crop in Canada is down by 4.6 percent according to an official Statistics Canada estimate released on September 13. Total planted area is estimated at 116,550 hectares (288,000 acres). Last year 122,180 hectares were planted and 117,280 were harvested. Planted area in the Atlantic Provinces, where most of Canada's potato exports originate, is estimated at 50,830 hectares for 1986, down almost 8 percent from last year.

—The Government of Argentina has authorized imports of table potatoes to help offset local shortages and dampen high domestic prices. Local trade sources estimate that imports could range between 20,000 and 25,000 tons. This demand could provide a marketing opportunity for U.S growers currently harvesting the fall crop.

—Portugal's tomato crop has been damaged by wet weather—the rainiest September in 100 years, according to Portuguese meteorological services. Estimates of the 1986 processing tomato crop have been reduced 20 percent to 470,000 tons. The forecast pack of tomato paste likewise has been lowered 20 percent, to 80,000 tons.

Wine, Beer, and Hops

—Italy's 1986 wine production is estimated at 72 million hectoliters (mhl), 14 percent greater than a year earlier. Domestic consumption of wine is expected to fall 5 percent from 1985, reflecting both the methanol poisoning scandal and a long-term change in consumer habits. Distillation under the EC price support scheme is likely to increase to 13 mhl, compared to 10 mhl in 1985.

Wine exports in 1985 were valued at $812 million, with $277 million going to the United States. Total shipments during the first 6 months of 1986 are off 38 percent from the corresponding 1985 period; sales to the United States dropped 26 percent. To bolster lagging sales, the Italian government will allocate $36 million over the next year and a half to promote foreign and domestic shipments; $2.5 million has been earmarked for use in the U.S. market.

U.S. EXPORTS TO JAPAN BENEFIT FROM DECLINING VALUE OF THE DOLLAR

The appreciation of the yen against the dollar has helped boost U.S. horticultural product exports to Japan in the first eight months of 1986. U.S. exports, at $432 million in 1986, are running 23 percent ahead of 1985 levels. Leading the surge are fresh non-citrus fruits, up 62 percent, canned fruits, up 91 percent, and fresh vegetables, up 115 percent. The largest dollar increases among individual commodities have been registered by grapefruit, up $20 million; almonds, up $10 million; lemons, up $9 million; frozen potatoes, up $7 million; and sweet cherries, canned peaches, fresh asparagus and frozen sweet corn, each showing a $4 million increase.

The U.S. Agricultural Counselor in Tokyo reports that the exchange rate shift has been reflected mainly in the prices of fresh fruits and vegetables, institutional foods, and products imported directly by supermarket chains and department stores. Supermarkets have used U.S. products as loss-leaders in "High-Yen Bargain Sales." There also has been an increase in the shelf space given to U.S. foods and the variety of products available.

On the other hand, there have been fewer and smaller drops for prices of products brought in by traditional importers, for processed foods and for products which are subject to import quotas. Traditional importers maintain that wholesale price decreases are not always passed on, that higher margins are being used for increased advertising or to get retailers to sell more, and that price cuts would lower the image of certain products, especially gift items. Stocks bought at higher yen prices likely are slowing price decreases for processed foods. Traditional importers are beginning to feel the pinch of competition from direct imports by supermarkets. Where supply is restricted by import quotas or through sole-source suppliers, there is no competition to force price decreases.

U.S. exports to Japan also have been aided by successful FAS efforts to lower trade barriers and joint FAS/industry promotional efforts. Negotiations between the governments of Japan and the United States have led to bigger import quotas for fresh oranges and orange juice, liberalization of grapefruit juice imports, and an agreement on fumigation procedures which permits the import of inshell walnuts.

Joint FAS/industry promotional programs have helped boost the exports of almonds, avocados, fresh and processed citrus, sweet cherries, canned corn, canned peaches and fruit cocktail, table grapes, papayas, frozen potatoes, raisins, walnuts, and wine. Funding provided under the Targeted Export Assistance (TEA) program, Section 1124 of the Food Security Act of 1985, is being used to promote exports of many of these products. TEA funds already have had notable effect in boosting U.S. exports of canned fruit, frozen potatoes, and wine.

Jonathan Gressel (202)447-6086
Based on a report from the Agricultural Counselor, U.S. Embassy, Tokyo

U.S. APPLE EXPORTS TO REBOUND

U.S. fresh apple exports are expected to rebound during the 1986/87 season, halting the downward trend of recent years. Factors contributing to an optimistic outlook include more product to export, a weakened U.S. dollar and a major thrust in promotional activities under the Targeted Export Assistance (TEA) program.

Although the 1986 U.S. apple crop is down 1 percent from 1985, the apple crop in Washington State, which exports the majority of U.S. Red Delicious apples, is up 44 percent. The 1986 EC apple crop is expected to be up 9 percent with 4 and 34 percent increases forecast for France and West Germany, respectively.

Among Northern Hemisphere apple exporting countries, the United States and France are major competitors in world apple trade, particularly in Middle East and Scandinavian markets. U.S. exports to Scandinavia have dropped steadily in recent years. Exports of 9,000 metric ton during 1985/86 represented less than half 1981/82 levels. Exports to the Middle East ranged between 36,000 and 48,000 tons in recent years, but plummeted to 13,634 tons during 1985/86, due in part to reduced petroleum revenues and weakened demand brought on by the repatriation of some foreign workers. France's exports to both regions grew during the past two seasons, helped by more competitive prices, a broader market which includes countries such as Iraq and North and South Yemen, and an EC export subsidy currently equivalent to $2.23 per 42-lb. carton. U.S. apple exports to the Middle East in the coming crop year may exceed 1985/86 exports slightly. Exports to Scandinavia should maintain 1985/86 levels.

Mixed performances are expected in other markets. Pacific Rim countries accounted for 50 percent of U.S. apple exports during 1985/86. An economic slump in the export-driven economies of the Pacific Rim, notably Taiwan, Singapore and Malaysia, coupled with low availability of U.S. product in 1985/86, contributed to a 17-percent decline in exports to the region. The Far East still represents a growing market for U.S. apples. Economic recovery in the region is closely associated with an expanded market for U.S. apple exports. Exports during the 1986/87 season will be up.

There are no expectations of increased sales to South America, Central America, and the Caribbean. The United States is continuing discussions with Latin American countries concerning opening markets, particularly during the Christmas season.

USDA has announced that $1.4 million in TEA funds will be made available in the 1986/87 crop year to help promote sales in Scandinavia, the Middle East, the Far East, and the United Kingdom. The program will be administered jointly by the Northwest Horticultural Council and the Foreign Agricultural Service.

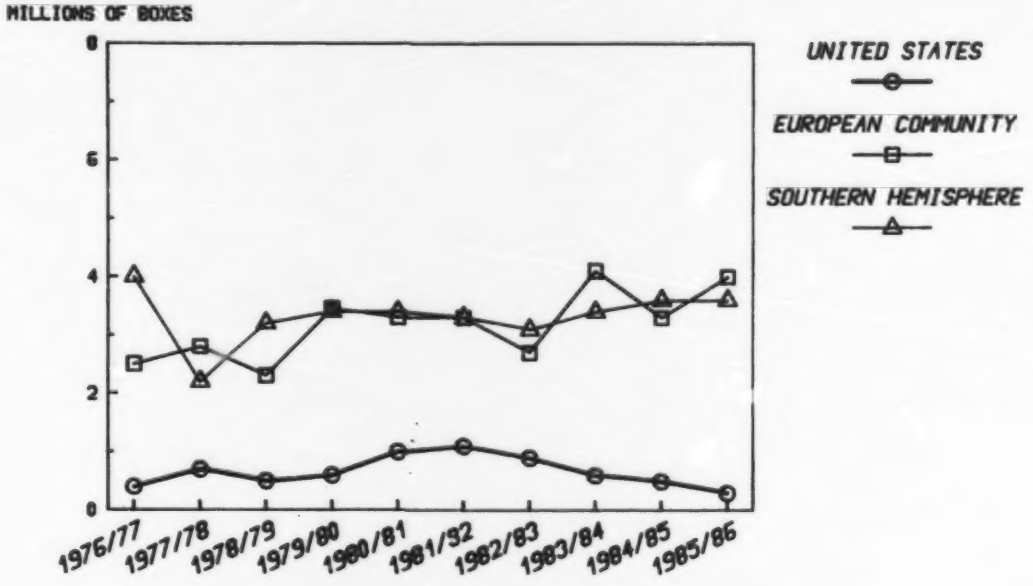
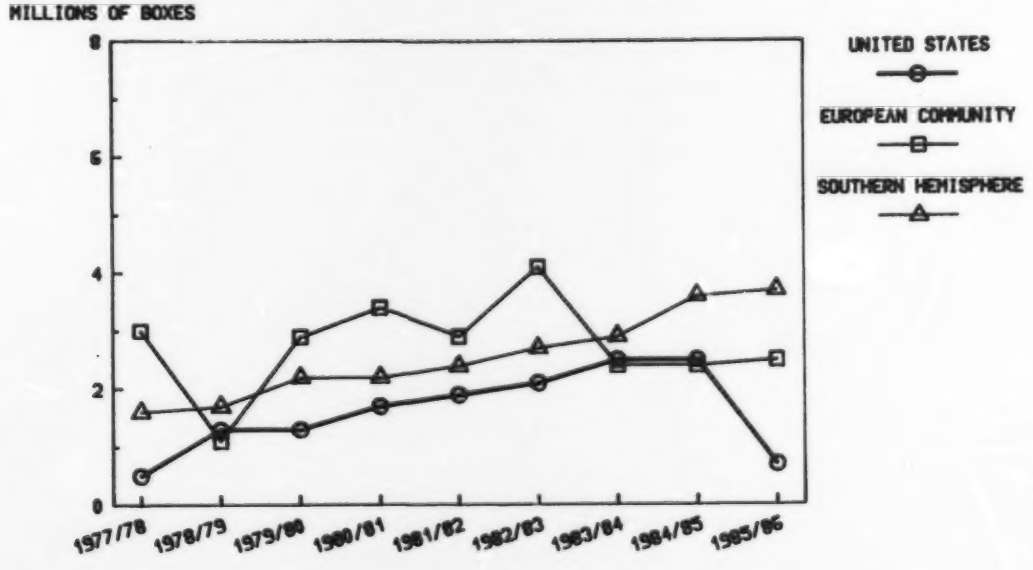
COMPETITION IN THE SCANDINAVIAN MARKET, U.S., E.C., & SOUTHERN HEMISPHERE EXPORTS



COMPETITION IN THE MIDDLE EASTERN MARKET U.S., E.C., & SOUTHERN HEMISPHERE EXPORTS



TUNISIA'S FRUIT AND VEGETABLE PROCESSING INDUSTRY

Tunisia is expanding its food processing industry. The domestic market is small, and potential exists for expansion into export markets. At present, three-quarters of food processing capacity is devoted to tomato paste production. A 1985 bumper crop of tomatoes was processed into an estimated 55,000 tons of paste, more than enough to meet domestic requirements of about 43,000 tons. This year's crop yield was lowered by disease, and production is expected to be lower.

Tunisia has about 40 processing plants, theoretically capable of handling 10,000 tons of tomatoes a day. Although the plants operate at only 50 percent of capacity, large quantities of fresh tomatoes perish before processing because of inadequate handling. Tomatoes often rot in the field for lack of crates, or spoil in the heat after picking.

The Government of Tunisia has encouraged farmers to plant more tomatoes to increase use of installed processing capacity, but the Food Processors Association (GICA) is focusing on improving collection of fruit from existing acreage.

The Tunisian Trade Agency (OCT) has said it will market any surplus 1986 tomato products, and the Ministry of Commerce and Industry has promised export promotion funds to help make Tunisian product competitive with subsidized products from other countries.

Tunisia also processes hot peppers, peas, apricots, quinces, olives, and capers. Only hot pepper sauce and apricots are exported in significant amounts, mostly to France. Annual fresh apricot production is about 20,000 tons; the EC has given Tunisia a special 3,500 ton duty-free quota for fresh apricots.

Based on a report from the Commercial Attache, U.S. Embassy, Tunis

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars. .

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.
